## Rogue Community College

EDUCATION

TADIRAN. SIMPLY DONE RIGHT

# Rogue Community College

Rogue Community College (RCC) is a two year, community college with campuses in both Jackson County and Josephine County, falling roughly in the geographic region known as the Rogue Valley in Southern Oregon. Each year the college provides educational experiences to more than 17,000 students in lower division transfer, job training, and developmental studies programs.

RCC has campuses across Southern Oregon, including: the cities of Grants Pass, Medford, and White City.

In 1995 RCC deployed Coral across all campuses. In 2012 RCC decided to upgrade their telephony solution to implement full UC&C capabilities.

### Aeonix Migration:

At the beginning of 2013 TouchPoint Networks, (an Elite Partner of Tadiran), began a migration project of RCC telephony to 3 Aeonix servers. The project configuration and off-site preparation took about 60 days while on-site deployment, testing and cut-over took less than three days. Currently Aeonix serves about 1100 users and provides UC&C functionalities across all three campuses. RCC is a user of Aeonix Navigator, and the embedded conference bridge application.

**Aeonix** is a pure software based Unified Communications & Collaboration solution (UC&C) that consolidates disparate business applications into a single powerful platform. It is delivered on a fault tolerant and open architecture, with intuitive management tools. Aeonix can be deployed in a private cloud environment or as an on premise solution.

## Your Benefits

**Scalability-** Aeonix has the ability to extend customer networks based on current demand and changing needs. The open-ended architecture allows customers flexibility to buy and install only what they currently need, and to add users, remote locations and additional applications as they become necessary. The standard system solution has the ability to provide service from 10 to 25,000 users

**Simplicity-** Aeonix includes unified management of all system services and applications. An intuitive GUI and a simple licensing mechanism make it easy to install, manage and maintain. Adding users, remote sites, or applications to one Aeonix server, is the same as adding them to every server in the network

**Open Architecture-** Aeonix supports standard protocols such as SIP (unmodified), CSTA, and Web Services. This non-proprietary architecture allows customers to seamlessly integrate a variety of common applications and to add desired devices to the system (Bring Your Own Device). Security protocols are implemented to ensure the system's integrity and prevent unauthorized operations

**Resiliency-** A system can consist of one or many servers while each Aeonix server provides complete 100% application functionality. In a "clustered" (multi-server) environment, automated diagnostics and recovery mechanisms deliver the highest levels of fault tolerance and failover.

The Aeonix delivers powerful, flexible, and adaptable communications to enterprises both large and small. Its simple unified management structure ensures that customers experience the lowest total cost of ownership (TCO) with minimal IT resources required.

## About Tadiran

Tadiran Telecom (TTL) L.P. is a privately held partnership, owned by Afcon Holdings Ltd. and part of the Shlomo Group. It is an established global provider of Unified Communications & Collaboration (UC&C), Contact Center, and Control Room solutions, serving businesses of all sizes, including tier-1 organizations in various market segments in 41 countries worldwide. Tadiran solutions feature a comprehensive family of products including UC platforms, IP PBXs, soft switches, contact centers, Dispatch Console, IP phones and mobility and desktop solutions.
